NCFM NAWSA CONTRACTING FACILITIES MANAGEMENT

BUILD | MAINTAIN | SUSTAIN

COMPANY PROFILE 2027

CONTRACTING & FACILITIES MANAGEMENT SERVICES

SPACES TODAY,
A BETTER TOMORROW

AT A GLANCE

A dependable service partner

NAWSA Contracting & Facilities Management provides a practical service proposition across construction works, building maintenance, landscaping and specialist facilities support.

Our approach combines structured planning, site coordination, responsible workmanship and client communication to support safe and functional properties.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

WHO WE ARE

Construction expertise. Facilities mindset.

Based in Doha, Qatar, NAWSA presents integrated contracting and facility management services for residential, commercial and institutional property environments.

We understand that a successful asset requires both sound construction and responsive maintenance. Our service approach considers quality of execution, operational continuity and long-term usability.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

OUR VISION

Built around long-term value

Our vision is to be a trusted contracting and facilities management partner in Qatar, recognised for dependable delivery, technical care and respectful client relationships.

We seek to contribute to built environments that are safer, better maintained, more resource-efficient and suited to the changing needs of property owners and occupants.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

OUR MISSION

Quality from planning to handover

Our mission is to deliver construction and maintenance solutions through clear scopes, practical scheduling, appropriate resources and consistent quality checks.

We focus on understanding client needs, communicating progress, managing site risks and completing work with attention to functionality, safety and value.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

CORE VALUES

The standards behind our work

INTEGRITY — transparent communication, realistic commitments and responsible conduct. QUALITY — appropriate materials, workmanship and inspection. SAFETY — awareness of people, property and worksite risks.

ACCOUNTABILITY — clear responsibilities and timely issue resolution. COLLABORATION — coordinated work with clients, consultants, suppliers and subcontractors. CONTINUOUS IMPROVEMENT — learning from feedback and site experience.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

OUR SERVICES

Integrated property solutions

Our service portfolio spans general construction, civil finishing, painting, tiling, landscaping, building repairs, plumbing, electrical maintenance, drainage services and specialist maintenance activities.

Services can be scoped as individual work packages or coordinated as a broader maintenance programme, subject to site survey, technical requirements, staffing and commercial agreement.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

INTEGRATED FACILITIES MANAGEMENT

Hard & Soft FM Services

Coordinated technical maintenance and property support.

HARD FM | Technical services

- Electrical, plumbing and civil maintenance
- Drainage, grease trap and sump pump support
- Painting, tiling and building repairs

SOFT FM | Property support

- Cleaning and housekeeping service options
- Landscape and external area care
- Floor care, waste handling and hygiene support

SERVICE CAPABILITY OVERVIEW

Scope, delivery method and resources are confirmed during proposal review.

TECHNICAL SERVICES

Hard Facilities Management

Maintenance solutions for safe and functional buildings.

BUILDING & MEP MAINTENANCE

- Electrical accessories and lighting
- Plumbing and sanitary fixture repairs
- HVAC maintenance (subject to confirmed capability)
- Civil repairs, painting and finishing

SPECIALIST MAINTENANCE

- Drainage and sewage system support
- Grease trap and sump pump servicing
- Preventive and corrective maintenance

SERVICE CAPABILITY OVERVIEW

Specialist or regulated work requires appropriately qualified personnel and approvals.

PROPERTY SERVICES

Soft Facilities Management

Cleaning, outdoor care and day-to-day site presentation.

CLEANING & HOUSEKEEPING

- Office, commercial and residential cleaning
- Deep cleaning and post-construction cleaning
- Glass cleaning and floor polishing

PROPERTY & OUTDOOR CARE

- Landscaping, gardening and irrigation care
- External area cleaning and waste support
- Washroom hygiene and housekeeping support

SERVICE CAPABILITY OVERVIEW

Additional soft services are proposed offerings, subject to NAWSA confirmation.

PROPERTY MAINTENANCE

Maintenance Across Property Types

Dedicated maintenance solutions for educational, residential and commercial properties.

01

School Maintenance

Routine upkeep of school premises

Civil, electrical and plumbing support

Repairs, inspections and site upkeep

02

Villa Maintenance

Residential property upkeep

Interior and exterior repair works

Plumbing, electrical and finishing

03

Commercial Buildings

Building fabric and MEP support

Planned and corrective maintenance

Common-area and facility upkeep

A PRACTICAL, PROPERTY-FOCUSED APPROACH

Our teams support day-to-day building functionality, occupant comfort and asset care.

Work scopes are coordinated to the requirements of each school, villa or commercial site.

RENOVATION & PROJECT EXPERIENCE

Renovation & Government Projects

Refurbishment capabilities supported by experience on government-sector projects.

01

School Renovation

Classroom and facility refurbishment

Painting, tiling and interior finishing

Civil repairs and renovation works

02

Villa Renovation

Interior and exterior refurbishment

Gypsum, painting and flooring works

Civil, plumbing and electrical upgrades

GOVERNMENT PROJECT EXPERIENCE

NAWSA has experience delivering works on government-sector projects in Qatar.

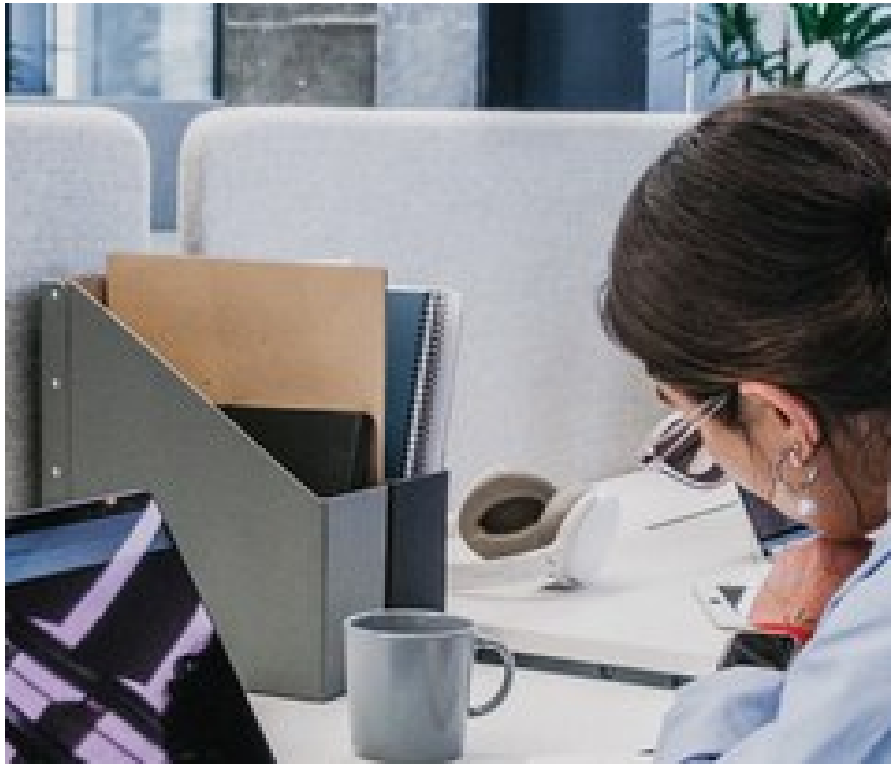

Our project involvement includes maintenance and renovation-related scopes, with a focus on quality workmanship, safety and client coordination.

CONSTRUCTION

Civil and building works

Typical work scopes include foundation-related activities, blockwork, plastering, surface preparation, painting, floor and wall tiling, ceramic installation and selected finishing works.

Each scope should be supported by drawings, specifications, approved materials, method statements, work sequencing and inspections appropriate to the project and client requirements.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

FIT-OUT & FINISHING

Detail makes the difference

Finishing activities may cover partition and surface repairs, ceiling repairs, internal painting, coating preparation, doors and hardware maintenance, decorative finishes and snagging rectification.

A disciplined finishing process considers substrate condition, sample approval, protection of adjacent surfaces, sequencing between trades and a clear handover checklist.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

FACILITIES MANAGEMENT

Keeping properties operational

Our facilities management approach centres on planned maintenance, reactive response, routine inspections, work order coordination and practical support for building occupants.

A typical programme may include asset registers, planned task calendars, fault reporting, prioritisation, service records and periodic client reviews tailored to the property.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

MEP MAINTENANCE

Essential building systems

Mechanical, electrical and plumbing maintenance support can include electrical accessories and lighting, plumbing fixtures, leaks, sanitary fittings and basic equipment checks within approved competence and scope.

Works requiring specialist authorisation, statutory inspection or licensed trades must be performed by appropriately qualified and approved personnel in accordance with applicable requirements.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

DRAINAGE SERVICES

Reliability below the surface

Drainage support may include investigation of blockages, cleaning access points, identifying recurring problems, assessing odour complaints and recommending corrective action.

For complex drainage faults, diagnostic methods such as camera inspection can be considered where suitable equipment and specialist resources are available. Preventive programmes help reduce avoidable disruptions.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

GREASE TRAP SUPPORT

Cleaner systems. Better continuity.

Grease trap work scopes may include condition assessment, installation coordination, routine cleaning schedules, maintenance and reporting for applicable commercial kitchens and food-service properties.

Site-specific design, sizing, discharge and disposal requirements must be verified against the relevant authority, client specifications and approved service arrangements.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

SUMP PUMP SUPPORT

Preventing avoidable downtime

Sump pump maintenance planning considers pump condition, operating cycles, float switches, discharge routes, alarms, electrical connections and visible signs of deterioration.

Routine inspections and documented corrective actions can support early identification of issues. Any repair or replacement should follow equipment guidance and safe isolation procedures.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

LANDSCAPING

Well-kept outdoor environments

Landscaping service scopes can include soil preparation, grading, planting, irrigation network works, grass and shrub care, hardscape interfaces and periodic garden maintenance.

In Qatar, landscape planning should consider heat, water efficiency, irrigation scheduling, plant suitability, drainage and practical maintenance access.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

QUALITY ASSURANCE

Control at every stage

A practical quality framework begins with understanding the contract requirements and identifying critical inspection points before work starts. Material acceptance, mock-ups and hold points can be established where required.

Site supervisors can document checks, track nonconformities, coordinate corrections and close punch-list items. Final handover records should match the agreed scope and client requirements.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

HEALTH, SAFETY & ENVIRONMENT

People and property first

Safety planning should address task hazards, toolbox talks, personal protective equipment, housekeeping, access control, equipment condition and emergency arrangements.

Before execution, work methods and permits should be aligned with the site operator, relevant authorities and project-specific requirements. Environmental care includes responsible waste handling and reducing unnecessary resource use.

SERVICE CAPABILITIES SUBJECT TO AGREED SCOPE AND SITE REQUIREMENTS

PROJECT DELIVERY

A clear path from request to close-out

01 ENQUIRY — understand the site and client objectives. 02 SURVEY — review conditions and access. 03 PROPOSAL — define scope, assumptions and exclusions. 04 MOBILISATION — arrange personnel, materials and approvals.

05 EXECUTION — coordinate trades, safety and quality. 06 INSPECTION — review completion and defects. 07 HANDOVER — submit relevant records and agreed deliverables. 08 FOLLOW-UP — support any agreed aftercare.

QATAR 2030 CONTEXT

Supporting a more sustainable built environment

Qatar National Vision 2030 identifies human, social, economic and environmental development as four interconnected pillars. Reliable buildings and responsible property maintenance can contribute to the broader goals of safe, functional and resource-conscious infrastructure.

NAWSA aims to align its service approach with these priorities through efficient maintenance planning, practical waste reduction, workforce care and a commitment to responsible execution. This statement is an aspiration, not a claim of government endorsement.
